5-Day AI Agents: Intensive Vibe Co...

Registered

Overview Discussion

- **Python familiarity is helpful**, but for much of the course you won't need heavy coding skills — a lot of the code is generated for you through Antigravity, MCP servers, and Skills.
- **Comfort with the command line** (terminal / shell) is ideal.
- A rough **understanding of what LLMs** are is helpful. If you're brand new to LLMs, the previous [Kaggle 5-Day Gen AI Intensive Course with Google](#) is a great primer.

2.2 What accounts and tools do I need to set up before Day 1?

You'll need the following:

- [Kaggle account](#)
- [Google account](#) (for AI Studio)
- [Google AI Studio API key](#)
- [Discord](#) (community)
- [Google Antigravity \(IDE\)](#) installed locally
- [Agents CLI](#) installed locally

Optional (only for the hands-on Day 5 deployment path): a Google Cloud project.

2.3 How do I get a Gemini API key?

- Follow the official guide: [Get a Gemini API key](#). This same key works for building agents with [ADK](#).
- Store it securely: for example, in an environment variable or a secrets manager.
- **Never commit keys** to public notebooks or repos.

3. Course Format & Products

3.1 What Google products will I use across the 5 days?

Day	Product(s)	Purpose
-----	------------	---------
